## **DETAILED ACTION**

### ***Specification***

1. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

### ***Oath/Declaration***

2. Applicant has not given a post office address anywhere in the application papers as required by 37 CFR 1.33(a), which was in effect at the time of filing of the oath or declaration. A statement over applicant's signature providing a complete post office address is required.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in-

- (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or
- (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

3. Claims 1-4 and 9-12 are rejected under 35 U.S.C. 102(e) as being anticipated by Maatuk (US 5,908,985). Maatuk discloses the claimed invention, a liquid

level detection system comprising a substrate [61] supporting a heater [62] and a sensor probe strip (column 7, lines 11-20) having several vertically spaced thermal sensors [71], with the resistances of the sensors being read by a microprocessor [81] and converted into liquid level data which is displayed [31]. See entire disclosure, especially Figures and columns 3-4 and 7. A power supply [90] is used. The temperature of the probe strip is interpolated between upper and lower sensor pads to yield a level reading between sensor pads (column 2, lines 9-20; column 6, lines 7-52; column 7, lines 26-32; column 9, lines 1-10).

#### ***Allowable Subject Matter***

4. Claims 5-8 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
5. The following is a statement of reasons for the indication of allowable subject matter: The prior art neither discloses nor fairly teaches the use of the claimed formula being programmed into a microprocessor used as a liquid level sensor having the claimed attributes.

#### ***Conclusion***

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Thermal liquid level sensors having similar properties
